

METHOD FOR INTEGRATING DRAWINGS AND SUPPORTING DOCUMENTS USING GRAPHIC OBJECT INTERFACE

ABSTRACT OF THE DISCLOSURE

A graphic object interface (GOI) integrates supporting documents with drawings and specifications. This Integration of often bulky and cumbersome information into a single computer program allows all individuals associated with the maintenance upkeep and troubleshooting of the equipment, building or other managed items to have a comprehensive source of information available to the individuals. Integration also reduces need for paper products and storage space. A self-booting system that runs on a MAC or PC with software contained on the disk provides independence from any computer operating system and software previously installed on the host computer, therefore providing compatibility with any future operating systems and software, but which also may be started from licensed software installed on the user's computer.
